

Mojo uniquely combines machine learning and crowdsourced human intelligence to transcribe, translate and interpret data with greater accuracy and speed than ever before.

On the technology side, our experience in document imaging led us to create a Deep learning Neural Network with machine and handwriting recognition levels beyond industry benchmarks. The results are then analyzed by humans when a technology-generated conversion score is less than acceptable.

Advantages:

Mojo is built on four pillars that work in harmony to delivery maximum value and separate it from other types of Big Data Solutions:

- **Security:** The Shredded Data model removes context, eliminating NPI or PHI.
- **Accuracy:** The Powerful combination of Machine Learning and multiple layers of human validation deploys a Six Sigma quality.
- **Speed:** Mojo utilizes Azure's service fabric platform to gain on-demand scaling capability.
- **Economics:** Mojo eliminates the need for facilities, human resources, security, training and more.

Unique service:

- 100% Forms Classification through Pattern Recognition, OCR, ICR, OMR, and Crowd Sourcing.
- Form SnipIts distributed to Crowd Source workforce for transcription while maintaining compliance.
- Shredded Data Service processes sliced data into fragments and stores it with ciphered indexes, removing context.
- Documents and data are distributed directly into your Admin and Document Management solutions.
